baddASS MK I - bass drum fortification device v1.1

baddASS is ideal for sorting out weak bass drums. It can be used to gate the incoming bass drum and therefore reduce spillage, but thats just the start. From storming *bottom end* to evil *cutting distortion*, **baddASS**'s *drive*, *crush* and *EQ* sections give you plenty of scope for re-shaping your kick. Add *click* for more attack, and *sub-bass* content with pure waves. Knobs for *badd*, *ass*, and *mix* allow control over the original bass drum, *low-end reinforcement*, and *distorted nastiness* - *without* using compression.

Features :

- 1 input, 1 output :
 - beef-up your kick with 20 to 200 Hz pure waves.
 - bend and twist - add punch and guts
 - designed for added **ooomph**.
- 1 Oscillator – choice of Sin, Triangle, Saw and Square waves
- Overdrive with controls for drive and threshold
- Bit crusher
- 2 Clippers
- 2 parametric EQ bands
- adjustable attack [click]
- seperate controls for 'badd' & 'ass' levels
- dry/wet mix control
- additional input and output gates
- post mix cut/boost control
- 16 presets

The **baddASS** Envelope modulates :

- Volume
- Pitch
- Clipper
- Bit depth

Installation & Registration

To install **baddASS**, unzip the downloaded zip file to your plugins folder. When you next start your host, **baddASS** will appear in your list of plugins. To uninstall, delete or move the dll file.

The **demo** runs for 28 days before registration is required. To register **baddASS**, click on the red '**REGISTER**' ribbon, and enter your user ID and Licence key. To obtain a licence either click '**Get License Key**' [sic] in the registration dialog, or visit www.roughdiamondproductions.com/whiteLABEL

Product Registration

whiteLABEL baddASS MK I

Enter registration information below:

User ID:

License Key:

Demo period: Days left

When you run **baddASS** for the first time, you will be prompted to enter registration details. Either enter your details and press '**Enter Key**' or skip the details and press '**Try Demo**'. To obtain a licence key, press '**Get License Key**'. Once you've entered your registration details, reload **baddASS**, and the device will be unlocked.

In demo-mode, the splash-screen is visible for 10 seconds. Registering **baddASS** hides the splash-screen. When the demo period expires, the panels lock and **baddASS** is disabled. To register, click on the red '**REGISTER**' ribbon. To check if you are using the most up-to-date version of **baddASS**, click the splash-screen and once registered, clicking on the green version ribbon will perform the update check.

Controls :

To change a control, click the centre of a knob and drag vertically. The knob will rotate as you drag. Where a knob controls 2 values, clicking and dragging the 'ring' allows access to the second value. If you prefer, you can click in one of the value windows and manually enter a number.

SENSITIVITY : [0 to -30 db]

When the input rises above this threshold, **baddASS** opens the gate to the synth section.

RELEASE : [0 to 1000 ms]

The time it takes for the **baddASS** envelope to complete. This Envelope modulates :

- note length
- detune
- input / output gate release
- clipper
- bit crusher

NOTE GENERATOR

purple centre : **FREQUENCY** [20 to 200 hz] - the base frequency.

ring : **DETUNE** [-1 to +1 octave] - how far to bend the note before the end of the release.

DISTORTION

centre : **DRIVE** [0 to 10] - level of nastiness applied.

ring : **THRESHHOLD** [-60 to 0] - maximum output of distortion

- at high drive levels this acts as a limiter, and at lower levels restricts overall shape.

surround : **BIT CRUSHER** - the lower this control, the smoother the sound.

bottom led : **CLIPPER** - restrict the distortion stage to levels set by the main envelope.

top led : **M** - modulate bit crusher too - as the note fades, bit resolution decreases.

2 PARAMETRIC EQ BANDS

centre : **CUT/BOOST** [-30 to +30 dB]

ring : **FREQUENCY** [20hz to 3khz, 3khz to 8khz]

surround : **Q** [0 to 3 octaves]

led : **ON/OFF**

OUTPUT CONTROLS

left : **BADD LEVEL** [-60 to +20 dB] level control for distorted wave

right : **ASS LEVEL** [-60 to +20 dB] level control for pure wave

centre : **MIX** fully left = dry, fully right = wet

mid left : **CLICK** - attack time for the **baddASS** Envelope

mid right : **GAIN** [-18 to +18 dB]

coloured button : **WAVESHAPE** [sin, triangle, saw, square]

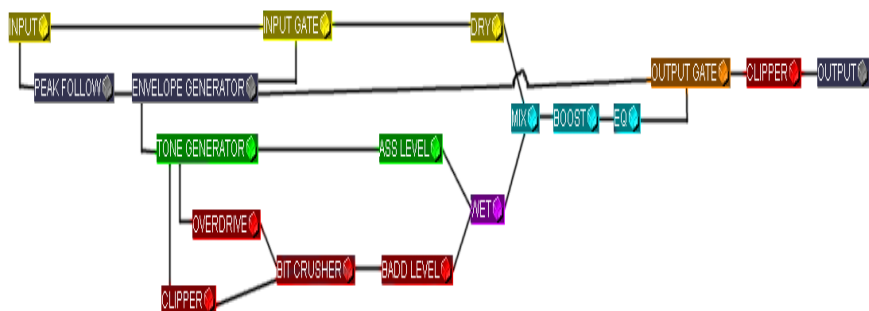

left led : **GATE OUTPUT** - emphasises click and further gates the main output

right led : **OUTPUT CLIPPER** - when used, the output is clipped at -0.5dB

gate input led : **GATE INPUT** - when lit, the input signal is also gated before becoming the dry output.

Signal Path :

Roughly speaking, this is what is going on inside **baddASS**. Your bass drum enters at the left hand input, and the **baddASS** output is on the right hand side. Obviously its way more complex than this, but it should give you an idea of the how things are working :

Midi Implimentation :

All knobs can be controlled using VST automation parameters, and **baddASS** also receives and transmits knob positions via midi control change messages on channel one :

Control Name :	Controller Number :	Range :
Sensitivity	1	0-127
Release	2	0-127
Frequency	3	0-127
Detune	4	0-127
Drive Threshold	5	0-127
Drive Amount	6	0-127
Crush	7	0-127
Clipper on/off	8	0-127
Env to Crusher on/off	9	0-127
EQ1 Frequency	10	0-127
EQ1 Gain	11	0-127
EQ1 Q	12	0-127
EQ1 on/off	13	0-127
EQ2 Frequency	14	0-127
EQ2 Gain	15	0-127
EQ2 Q	16	0-127
EQ2 on/off	17	0-127
Gate input on/off	18	0-127
Badd level	19	0-127
Ass level	20	0-127
Dry / Wet	21	0-127
Click Amount	22	0-127
Output Gate on/off	23	0-127
Output Cut/Boost	24	0-127
Output Clipper on/off	25	0-127
Waveshape	26	0-127

Known Issues :

multi-core bug - In some multi-core systems, running multiple instances of **baddASS** can cause problems. This will be fixed in future version once Synthedit is updated. There is a simple solution as follows :

make numbered copies of wl_baddASS.dll [wl_baddASS_1.dll, wl_baddASS_2.dll, wl_baddASS_3.dll and so on] and use the copies instead of the original making sure you keep track of which number you're using.

protocols users with fxpansion's vst-rtas adapter - as above : use multiple copies of wl_baddASS.dll

font rendering under windows 2000 - the text-field elements of **baddASS** may not display correctly. There may not be anti-aliasing and the font could appear blocky. If this is the case, try installing service pack 4.
